## SmartLynx Airlines selects Conduce eTechLog8 Software

**Date: 30<sup>th</sup> January 2015**

Conduce Group Limited is pleased to announce that it has partnered with SmartLynx Airlines to carry out field trials of the Conduce eTechLog8 software application. The eTechLog8 application uses tough-pad or tablet hardware and eliminates the paper technical log when fully adopted. The solution has all the required tech log book functionalities on the device and is supported by a fully functioning web application back end to manage all line maintenance activities for the aircraft whilst in operational service.

The product has been developed and designed to improve ramp turnaround efficiency resulting in improvements in OTP (On Time Performance) and to ensure that all the required information is shared to all parties in near to real time. This enhances overall operational performance through the use of accurate and up to date information which aids correct decision making in relation to that aircraft's current technical status.

SmartLynx will complete the trial on a selected A320 aircraft operating in Europe. The Latvian and Estonian CAA have given a positive reaction to the concept of using eTechLog8 technology to enhance the airlines' efficiency along with improving technical data integrity and quality. Successful completion of the field trial will lead to SmartLynx seeking full regulatory approvals from the Latvian and Estonian aviation authorities for the removal of the aircraft paper technical log page from the aircraft. Such a step forward will enhance SmartLynx's operation as an ACMI provider and improve the services given to its customers. The full project would include integration with SmartLynx's Commssoft OASES MRO software and IFS EFB solution.

Paul Boyd, Managing Director Conduce, stated that the project team at SmartLynx, led by Vera Suhova, "had carefully evaluated many aspects of the eTechLog8 solution and as a consequence I predict the trial will be a great success as many questions have already been raised, addressed and answered"

"We at SmartLynx are convinced that implementation of the electronic technical log solution will optimize our internal processes giving improved operations efficiency and productivity. We look forward to trying out the eTechLog8 with Conduce Group Limited. The product is promising and offers many desirable features. The support Conduce has delivered to date leads us to expect a successful trial resulting in a product configured to meet SmartLynx specific business needs."

## **About Conduce Group Limited**

Conduce Group, in its current form, was established in 2009 to bring together its software development and consultancy service businesses into a single organisation. The company specialises in providing software development and consultancy services for the aviation industry. Conduce emphasises the development of true cutting edge mobile applications. It differs from other aviation software development companies in that it focusses on building from the direct hands on experience of individuals with key roles in the aviation sector. ## **About SmartLynx Airlines Limited**

SmartLynx Airlines is based in Riga, Latvia. From early 2015 the company will operate 12 Airbus A320 aircraft offering wet lease (ACMI) services worldwide and passenger charter flights in Europe from Riga and Tallinn (SmartLynx Airlines Estonia). The SmartLynx brand focuses on providing smart solutions in a 'business to business' niche market. ([www.smart-lynx.com](http://www.smart-lynx.com))
